

NAPCO iBridge®

Remote Services for the Connected Home

THE NAPCO IBRIDGE CONCEPT:

"iBridge is a line of interactive services that generates recurring monthly revenue for dealers, providing consumers with smart phone, tablet or PC access and 24/7 control, anytime and anywhere, to and of their security systems, video cameras, HVAC systems, lighting and locking of their homes."

IBRIDGE STANDALONE OR BUNDLED SERVICES:

Napco's iBridge® line of Interactive Remote Services, including security, video, lighting, temperature & locking controls are available thru the iBridge App for use on any smartphone or smart device (tablet /iPad), etc.

iBridge Automated Z-Wave™ Device Home Controls, More Convenient for Accounts & Dealers by Design:

iBridge home controls including indoor and outdoor lights, dimmers, thermostats, locks and small appliance modules operate using Z-Wave, a proven, wireless mesh networking technology that is a standard in wireless home control. Devices can be manually activated, locally or remotely, and set to respond with custom scenes, schedules or occupancy, ie, when a room is

entered lights light, temperature is increased, etc.(even when the system is disarmed.) Anytime a custom scene is created a button with the same name is automatically added to the Scenes Screen, so that it can later be manually activated at will, too.

Napco No-Roll™ Customer Service Calls & Service Enhancements:

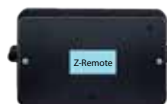

With iBridge, editing and adding Z-Wave devices is made easy, and uniquely remote-configurable by dealers from their own smart devices, smart phone or iPad/tablets. No trucks need to be rolled to amend security system or Z-Wave device settings, scenes or schedules. Also, iBridge Tablet firmware can be easily upgraded through the internet, no service calls necessary.

iBridge Centers Around an Affordable Bus-Mount Module NOT a Fancy Touchscreen!

Unlike competitive products where an expensive touchscreen is central to the home control line and dealer offering, Napco made the iBridge App and suite of services the focus, and they are all provided on any NAPCO System by adding the affordable IBR-ZREMOTE Module. This gives the Napco iBridge Dealers a wide choice of systems to offer and by **not requiring a touchscreen**, it makes them more cost-competitive in getting a range of new customer accounts, high-end or not, plus retrofit business from existing ones.

IBR-ZREMOTE Module:

iBridge services central component is the IBR-ZREMOTE Module, providing:

- Security system control (same as iRemote-Mod Module)
- Internet access

- Z-Wave device control
- Integration of control panel activity with cameras and the Z-Wave appliances

CHOICE OF 3 CONSUMER INTERFACES:

1. **iBridge APP:** The iBridge System Services, security, video, lights, temp., locks, can be controlled simply from the iBridge App for iPhone/iPad or Droid (download from iTunes or Google/Android Market).
